Filler suitability:

- = Best
- = Better
- = Good
No Claw = Do Not Use

High Load Adhesive
Fiber Filler F1

Structural Adhesive
Filler F2

Light Density Adhesive
Micro Fiber Filler F3

Bridging Adhesive Filler F4

Light Density Fairing Filler F5

Microsphere Fairing Filler F6

The Hawk Epoxy products are manufactured by Sea Hawk Paints, a division of New Nautical Coatings, Inc., the leader in boat bottom coatings and boat repair products. American made and owned for over 35 years, New Nautical Coatings, Inc. was established in 1978 and is dedicated to bringing only the highest quality products to today's mariner.

We are a family owned and operated business with a commitment to excellence in our products, service and customer satisfaction. We believe that you’ll agree — Sea Hawk products really do work better!

Hawk Epoxy is an easy to use low-viscosity epoxy system that makes building and repair jobs a breeze. This state-of-the-art system is for building and repairing boats, planes, surfboards, canoes, and many other substrates. There is also a multitude of home construction and repair projects perfectly suited for Hawk Epoxy.

The foundation of our system is our R1 Epoxy Resin which fulfills all of the different application needs with its eleven-part catalyst and fairing options. Bonding, fairing, coating, waterproofing and air exchange reduction have never been simpler.

Hawk Epoxy Base Resin
R1 Epoxy Resin - A premium blend, low odor epoxy resin used for general fiberglass repair and construction for superior adhesion, strength, bonding, filling, and moisture barrier. Must be used in combination with desired Hawk Epoxy Catalyst. May be combined with Hawk Epoxy fillers or thickeners for a variety of applications and desired effect.

Hawk Epoxy Catalysts
C1 Ultra Slow Catalyst - Designed for construction and repairs with superior adhesion, strength, bonding, filling, and moisture barrier qualities at higher temperatures and for a very slow cure speed at room temperatures.
C2 Slow Cure Catalyst - Designed for high-strength bonding, coating and fiberglass applications with excellent moisture barrier characteristics when slower cure speed is required and during high temperatures.
C3 Fast Cure Catalyst - Designed for construction and repairs with superior adhesion, strength, filling, and moisture barrier qualities at cooler temperatures and for a fast cure speed at room temperatures.
C5 Clear Finish Catalyst - Designed for very clear fiberglass cloth and coating applications with exceptional moisture barrier characteristics. Perfect for natural wood and carbon fiber clear coats with no blush. Longer working times in very warm temperatures.

Hawk Epoxy Fillers
F1 High Load Adhesive Fiber Filler - Thickens to a light gray color creating an easy to use adhesive designed for bonding hardware and other applications with dissimilar materials. This mixture will maximize bond strength for anticipated high loads.
F2 Structural Adhesive Filler - Thickens to an off white color creating a general purpose thickening additive for bonding, gap filling and filleting. Mix to a workable consistency allowing sag free and easy flow properties for vertical and overhead applications.
F3 Light Density Adhesive Micro Fiber Filler - Thickens to an off white color, great for bonding many substrates, especially wood. The mixture also creates a multipurpose adhesive for many other substrates in addition to providing excellent substrate wetting and penetrating characteristics. Increases impact and abrasion resistance.
F4 Bridging Adhesive Filler - Thickens to a brown color creating an easy to use adhesive with excellent gap filling and filleting qualities. This mixture blends with many different types of wood to allow for a natural looking fillet or gap fill.
F5 Light Density Fairing Filler - Thickens to a reddish brown color achieving an easy to sand and carve fairing compound for small to large areas. This closed celled structure can also be used for increased acoustic and thermal insulation.
Extensive research and testing has produced Hawk Epoxy’s toughness and strength of the cure system. As well as offering incredibly strong mechanical properties, its low viscosity allows extremely easy wetout of difficult fabrics.
Fiberglass applications, fairing and bonding metals, woods, textiles and more.

Another premium product from Premium Performance Epoxy System

Extensive research and testing has produced Hawk Epoxy’s toughness and strength of the cure system. As well as offering incredibly strong mechanical properties, its low viscosity allows extremely easy wetout of difficult fabrics.

Fiberglass applications, fairing and bonding metals, woods, textiles and more.

• High Tensile Strength
• Strong and Durable
• Easy to Use
• Excellent Bonding Strength
• Water Resistant
• Cost Effective
